Sr No.	Sample ID	Patient Name	Age	Sex	Result	
					2019- nCOV	Other Resp. viruses
1	RMRCGKPCOV-5409	Arapana lal	17	F	Negative	-

**Prepared by:**

**Checked and Approved by**

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance: -

- Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection\*
- A positive test result is only tentative, and will be reconfirmed by retesting.
- Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. \*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR
